

kiddieGAIT™

KiddieGAIT offers a carbon composite framework for you to build an orthosis to encourage functional heel-to-toe gait for children from 3 years of age.

KiddieGAIT BABY-sizes are three smaller sizes where the goal is to support the foot in early stages and beyond to stimulate and assist the child to stand and toddle, providing the support for correct functional posture and gait.

Can a functional orthotic environment change the deformity evolution?

- Early help in mobility may prevent deformity
- Increased weight bearing may help development
- Combine with inner-boot (SMO, UCB, SureStep)

KiddieGAIT now available in 6 sizes from babysmall that fits about 9 months of age up to large that would be for about 9 years of age.
