

# You're hard at it every day...

with back to back patients, documentation requirements, audits, delays and office overhead. You need to provide custom foot orthotics quickly that are affordable and accurately manufactured. You want more of a life outside the office.

Now picture a 3D foot scanner in your office. You didn't buy it but there it sits, ready to serve. In mere minutes you cast and modify the orthotic on screen. This stout machine is strong enough to stand up to your largest patients and is warrantied. Powerful software and training was included. Orders are immediately transferred to Amfit lab with standard EVA styles starting fabrication the following business day.

The best part? You pay for the orthotics, not the scanner

## What are you waiting for?
