

Have you seen our newest addition? Modular Component Series from Becker

We have enhanced our comprehensive line of orthotic components by adding a new modular series of knee and ankle joint options. Our new modular knee joints provide automatic locking, or ratchet locking features and are completely interchangeable with one another, as well as with our Stride Family of stance control orthotic knee joints

Our new modular ankle joints are available in double action, or standard action and may be ordered with either a 3/4" or 5/8" recess to accommodate our A & B size modular knee joint uprights. In addition, the recess on our modular ankle joints is now square in shape to allow for easier upright attachment.

To further compliment our modular line, we now offer lamination uprights for use with our modular knee and ankle joints. Lamination uprights may be ordered separately, or pre-installed on any of our new modular components.
