

FULLstride™

A logical next step.

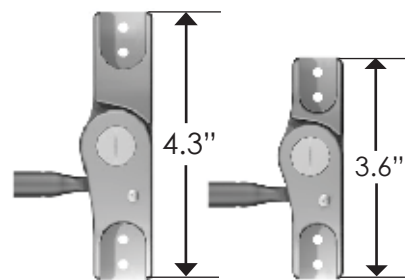

Delivering maximum control of varus/valgus instability and knee hyperextension, the **FullStride™** automatically locks and unlocks during the gait cycle, providing natural movement with superior stability and comprehensive knee joint control.

Easily converted into an automatic spring lever lock knee joint, the **FullStride™** can also be paired with our GX-Assist option to provide extension assist if required.

Easy to fabricate and easy to fit, the **FullStride™** is the logical next step in orthotic stance control knee joints.

The **FullStride™** is available in "B" size for both youth and adult patients. Offering a 25% reduction in weight to enhance clinical application, the "B" size gives you new possibilities in offering stance control to your patients.

FULLstride

A logical next step.
