

safetySTRIDE™

Natural Motion. Mechanical Stability.

Natural Motion: The **SafetyStride™** automatically locks and unlocks during the gait cycle, providing natural movement with superior stability and comprehensive knee joint control.

Mechanical Stability: Designed to unlock at terminal stance, an internal lever re-engages during swing phase to ensure knee joint stability prior to heel contact. Individuals who intermittently fail to reach full extension will now have the added security and stability they require while ambulating.

The **SafetyStride™** can be paired with any ankle joint on the market and is fully interchangeable with other joints in the **Becker Stride Control** family.

The **SafetyStride™** orthotic knee joint should be considered for individuals with significant quadriceps deficit and generalized lower extremity weakness.

Patent Pending

safetySTRIDE™
natural motion. mechanical stability.

FullStride™ & SafetyStride™ with NEW G-Assist Option

The **FullStride™** and **SafetyStride™** may now also be ordered with a **G-Assist** option that utilizes a pneumatic spring to assist in knee extension during the swing phase of gait.

For details and ordering information, please contact our customer service department and ask for a copy of our new **Stance Control Overview Guide**.
