

CAMBER AXIS HINGE®

The **Camber Axis Hinge® (CAH)** was developed to provide an adjustable range-of-motion ankle joint with anatomical axis alignment that can be used in thermoplastic orthoses. By providing a controllable range-of-motion, the Camber Axis Hinge® may help improve many gait deficits resulting from a loss of knee control. If you would like to earn **PCE** credits at home and learn how the CAH can provide benefits to your patients, please call our customer service department today to receive your free copy of the **Camber Axis Hinge® Information CD**.

Features of the CAH include:

Model 750

- Seven different color coded range-of-motion keys.
- The Camber Axis Hinge® eliminates the need for posterior stop mechanisms.
- Permits solid ankle or variable anterior/posterior stop settings.
- Manufactured of 410 stainless steel for strength and durability.

Other CAH products:
