# Introducing the High-Fidelity™ Interface System

The first in a line of OsseoSync™ Technology Products from biodesigns, the Interface Company

Say goodbye to old-fashion sockets and welcome the next generation of prosthetic limb connectivity – the **High-Fidelity™ Interface**. Unlike conventional sockets that simply fit the surface of the limb, the HiFi™ Interface utilizes a patented alternating compression and release technique to capture and control the underlying bone.

The patent-pending **High-Fidelity™ Imager** allows a HiFi™ trained prosthetist to apply targeted compression and release and maintain precise and consistent pressure during the HiFi™ Interface's casting/scanning phase.

**THE RESULTS:** Enhanced connectivity, superior performance with faster response times, increased comfort, sub-ischial trim lines, reduced energy expenditure, greater range of motion, M-L and A-P stabilization, improved rotational control, and a much lighter feeling prosthesis.

biodesigns is offering training courses in the HiFi™ Interface System at the transfemoral level. Join our growing international HiFi™ Professional Network and offer this patented HiFi™ technology to your patients.

## UPCOMING HiFi™ TRAINING

Jan. 16 - NJ / Jan. 18 - NY / Jan. 26 - CA / Feb. 20 - FL
