

Proximal Lock

Simply easier

Designed to control rotation, our newest zero clearance lock is a big improvement over our original Summit Locks. The larger flexible liner attachment is easier to roll on, and distributes more pull. It's easy to install and easy to don. A new adhesive, INCLUDED with each lock, is flexible even after it sets, which makes installation easier.

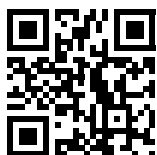

- Large flexible liner attachment
- NOW INCLUDED: flexible adhesive for easy attachment
- Easy-to-mount lock
- Use the distal adaptor of choice
- Multiple tooth design of strap allows for easy seating adjustment

CD116 Proximal Lock

One strap, one lock, fabrication parts and glue included

CD116XS Extra strap kit,

Includes one strap, and liner attachment for additional liners

Check out a video
of the Proximal
Lock in action!

This lock is great for long limbs that don't have much build height and can be used with most cushion or locking liners. Even better, you can use the distal adaptor of choice. Simpler, easier, better.
