

Winning with Patient Comfort

OP-TEK® Flex

Soft, flexible EVA copolymers that provide outstanding patient comfort when used as an inner liner for rigid socket frames.

OP-TEK® Flex is specially formulated to maintain more consistent walls during forming compared to many other flexible plastics.

OP-TEK® Flex Comfort exhibits excellent seaming characteristics during drape forming and more consistent walls during blister/bubble forming compared to many other EVA copolymer materials.

OP-TEK® Flex BiLam provides added comfort and improves aesthetics for patients wearing carbon socket frames. The inner layer contains a hypoallergenic, FDA compliant additive that reduces friction, and the outer layer helps hide trim lines and window cut-outs of carbon socket frames.

Put us to work for you!™

Supplying quality plastic sheets, transfer papers, and fabrication supplies to the O&P professional nationwide.
