tpe

Thermoplastic Elastomer

APPLICATION:

TPE is a unique material made by combining rubber with Polypropylene. This creates a material that is more resistant to stress cracks and will result in a finished product that is more durable and longer lasting. Because TPE is more flexible than Polypropylene or Co-Polymer alone, it is an excellent choice for AFO's where strict rigidity is not required and for foot orthotics. TPE bonds well to posting material and is easy to modify by heat gun.

thickness: 1/8", 5/32" and 3/16"

sizes: 32" x 48" and 24" x 48"

color: White
