

# ENDOLITE

The Esprit foot provides active walkers a soft rollover with excellent energy return. Its tri-pod design allows users to experience superior ground compliance and response on all terrain. The Esprit foot relies on e-carbon springs for optimal response, energy return, and durability to stay in step with daily activities. All this in a lightweight, low profile package that is well suited to active walkers with varying cadence.

### Energy Management

The Esprit's e-carbon springs ensure a proportional and efficient response to the user's preferred activities. It has a soft rollover with excellent energy return.

### Dynamic Heel

The independent e-carbon heel provides shock absorption and forward progression for a smooth rollover.

### Propulsion

Twin toe optimizes energy return while adapting and conforming to all terrain

### Stability

The tri-pod system provides excellent medial-lateral compliance and conforms effectively to all terrain. It enhances ramp and cornering ability, reducing shear forces on the skin at socket interface, and has a positive impact on socket comfort and limb stability.
