

echelon

endolite

The next level in comfort, the Echelon is designed for the low to high impact K3 amputee who may enjoy occasional recreational sports. Lightweight and dynamic the Echelon utilizes hydraulics to control plantar and dorsi flexion.

Features and benefits:

- Hydraulic controlled plantar and dorsi flexion
Self leveling of heel height for varied terrain and heel heights
Provides comfort while traversing varied terrain
- Biomimetic design to simulate more natural ankle motion
- Hydraulic ankle allows for greater toe clearance in swing phase
- e-carbon layup
- Truly independent heel & toe
- Easy to cosmetically finish
- 36 month warranty

The Echelon was designed using

biomimetic

principles to simulate the body's natural movement. The hydraulic ankle provides controlled plantar flexion for stability, and comfort for the amputee while traversing varied terrain.
