

élan

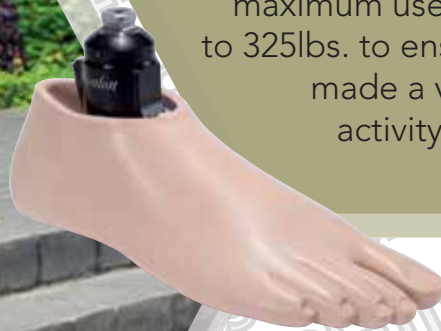

Easy to fit, easy to bill

The ability to use a computer for programming, fine tuning and monitoring makes the fitting process easy, quick and effective for each individual user's gait requirements. Now, CMS has verified the use of the L5973 code when billing for the élan making the billing process as quick and easy as the fitting process.

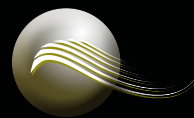

avalon^{K2}

Increased weight limit

The avalon^{K2} was created as a simplified version of the popular echelon foot to offer the features and benefits of a hydraulic ankle/foot to less active users. It has also been shown to have a positive impact on reducing the incidences of falls and stumbles. Now, the maximum user weight has been increased to 325lbs. to ensure that the avalon^{K2} can be made a viable option for more of the activity level K2 patient population.
