

# LiNX

Linx is the first fully integrated, microprocessor controlled, lower limb system where the foot and knee continuously talk to each other to optimize safety and performance. Every element is part of a design whole that balances energy, posture and sensation for a truly captivating walking experience.

## Why is Linx so much better?

- Increased safety
- Less effort to walk
- Improved gait
- Reduced compensatory activities
- Reduced strain on the rest of the body

# Award Winning Technology

Linx has been globally recognized by leading design awards. Most recently the MDEA in the US, winning gold in the Rehabilitation and Assistive Technology category and overall best in show.

MacRobert Award  
Winner 2016
