- › Use with any uncovered liner
- › Light, durable, and easy to use
- › For use with transtibial and transfemoral patients
- › Machine washable and easy to care for
- › Customized seal heights available

### What Are Aura & Echo?

The Aura and Echo Locking Seals are innovative, cost effective solutions for optimal suspension in expulsion and vacuum socket systems. Their compact and lightweight design provides patients with a secure fit while preserving freedom of movement and establishing a durable airtight suspension. The Aura or Echo systems lock the liner firmly against the inner wall of the socket for comfort and stability throughout the day. The Aura is recommended for soft tissue while the Echo is recommended for medium to firm tissue.

"The Aura and Echo Locking Seals are internal seal systems developed as a compact and lightweight approach to securely lock the liner to the inner wall of the socket. Compatible with Origin silicone liners and vacuum and expulsion systems."
