

Aura

Locking Seal

Aura Solid Seal

Designed for soft tissue density

Embedded Silicone

The silicone is fully embedded into the sock for an airtight seal

Easy to Use

Machine washable, light, and durable

What is Aura?

The Aura is the original internal seal system made specifically for soft tissue density with the solid seal. The Locking Seals are designed for Origin Silicone Liners and vacuum or expulsion socket systems, and are available in custom seal heights or off the shelf sizing. See our sizing diagram online.

SUPPLIER

Aura patents: 8,093,045

The **Aura** and **Echo Locking Seals** are internal seal systems developed as a compact and lightweight alternative to sleeves. Compatible with vacuum & expulsion socket systems.

Echo

Locking Seal

What is Echo?

The Echo Locking Seal is an internal seal system and utilizes the V-Seal developed specifically for medium to firm tissue density. It is a compact and lightweight approach to securely lock a liner to the inner wall of the socket. The soft silicone ring is a cost effective, comfortable alternative to suspension sleeves.

Echo V-Seal

V-shaped seal designed for medium to firm tissue density

One-Ply Sock

Made from a quality form fitted one-ply sock with anti-ravel stitch and reinforced toe with tighter stitch pattern
