

# We've Got You Covered

## with Evolution's Custom Silicone Liners

Evolution's custom silicone liners come in all shapes and thicknesses and are fully customizable and tailored to each patients' individual needs. We can help select liner properties based on the patients' activity level, type of socket, limb shape, and personal preferences to best suit their lifestyle. Silicone is innately compatible with human-tissue and is also the best option for our high vacuum, expulsion systems, and our Aura and Echo Locking Seals.

### Custom Origin

The Custom Origin is excellent for uniquely shaped limbs and/or sensitive limbs; made from a positive cast, negative cast, or AOP files from INSIGNIA by a certified prosthetist.

A new Custom liner takes 5 days to create.

### Wave Feature

The Wave Feature adds greater freedom of movement, when flexing, sitting, or bending the knee, to the Custom Origin liner.

The Wave can be ordered with any new liner or added to an existing liner mold.

### the Natural

The Natural liners are made with the same quality silicone that our Origin liners are made of without any additives in the silicone mixture creating a clear, tacky, odor free silicone that represents the natural properties of silicone.

### Made with Origin Silk Silicone

Made with the Origin line of medical grade silicone that is naturally compatible with human tissue and resistant to fluids and bacteria. Origin liners never reduce in strength or thickness and are intended for patients of all lifestyles.

### 100% Pure Silicone

Perfect for extra sensitive skin. Pure medical grade silicone is even more innately compatible with human-tissue.
