Echo with the Origin Wave

Check Sockets & Definitive Sockets

Evolution's check and definitive sockets are custom made with your choice of quality components and materials. Definitive sockets are made from a special weave and weight of premium carbon fiber that results in a lighter, stronger socket. For check sockets you can choose from PETG and thermolyn with or without components.

Components & Supplies

Evolution's line of specialty components and supplies for the fabrication of sockets gives you more options when it comes to customizing a socket for your patient. Our socket systems aim to give the clinician the most versatility to mix and match a wide variety of resources in today's market. We can make the socket with the desired components at Evolution or we can send the materials to you.

Custom Liners & Suspension

Evolution's custom liners are made from a medical grade silicone. You can choose from a tacky (the Natural) or smooth silicone (the Origin) and also add the wave feature as well as select the thickness of each area of the liner. Evolution's Aura and Echo Suspension systems have custom seal heights, so you can be in control of where you want the elevated vacuum in the socket.

Evolution's Custom Solutions give you the capability to mold our products to your patients and customize them to each of their lifestyles.
