

Velocity Central Fabrication is capable of manufacturing a wide variety of lower extremity devices including AK and BK double wall systems. All of our products and services utilize state-of-the art technology and materials.

Alignment Plates are designed for maximum flexibility. With AK and BK sizes these plates can be used in dynamic alignment and then transferred out for our standard mounting plates. Mounting Plates are designed for ease of use with a large tie-in groove and lamination dummy.

The OTS Liner is made from medical grade silicone. It is available in seven different sizes. The liner comes in cushion or pin, soft cup or standard and three design variations for BK, AK and high vacuum AK sockets. All the cushion liners can be used in high vacuum socket systems.
