

weigh the difference!

© 2002 Fabtech Systems

Lighter is not always better.

Carbon braid is sold by the pound from the manufacturer. Yield for carbon is based on a feet-per-pound yield ratio set by the manufacturer. Have you ever pulled on carbon braid? It stretches quite a bit! Most carbon is pulled off a spool and cut at its stretched length, dramatically effecting yield.

At Fabtech we weigh our carbon so our customer is guaranteed they get what they pay for. Everytime.

Fabtech CB6
1.56lbs

Put us to the test!

Compare the weight of your current 10-ft, 6-inch carbon braid to our CB6 10-ft. If you don't have an exact match, call for comparisons.

Carbon and more.

We carry all common sizes of Carbon Braid and Carbon Mat. We also carry Nyglass, Perlon, Economy Beam Filler and other lamination materials. To satisfy all your needs, we are continually adding to our carbon and materials line.

Special while supplies last:

CB-4-30 30ft Carbon Braid \$120.00^{ea}
