# Yes, we are control freaks.

## Don't freak out, try Fabtech.

The government, companies and employees are demanding safer chemicals. Are you? Fabtech Systems' first priority is to bring our customers the safest, highest quality products at a great price. So what did we do? We revolutionized epoxy laminating!

### Total Control: Rapid Cure Technology

You demand total control in the lamination environment, and that's what you get with Fabtech's Restech Epoxy Lamination System. Unlike acrylic and other epoxy resins on the market today, Restech Epoxy Lamination System gives technicians total control over these features:

- 1. Gel time.** Use our Rapid Cure Technology Gel Promoter to speed it up or slow it down. It's your choice.
- 2. Cure time.** Need a cured socket fast? No problem! Use our Rapid Cure Technology Heat Sack for a consistent cure time of 30 minutes.
- 3. Viscosity.** Need it thinner or thicker? No problem! You can change it.

## We got rid of the dangerous variables.

Other epoxy resins are full of uncontrollable variables. We gave our chemists a list of these problems and they solved them! Our simple mixing ratio and proprietary formula produces ultra fast cure times that make Restech Epoxy Lamination System as easy to use as acrylic and vinyl ester resins. Take control and give Restech a try.

- Infinite shelf life.
- Ships as a non-hazardous material. Safe enough to carry on a plane.
- Contains no styrenes, making Restech Epoxy Lamination System the safest laminating resin on the market.

- Cured resin is heat moldable.
- 5qt kit contains 20% more resin by volume.
- 30 min cure
