

# Gripped by a Gator?

*Fillauer*

You've never been gripped like this! Fillauer has created the first, all-conditions, clutch type lock. This novel approach uses ball bearings in a wedge-fit arrangement to create a quiet, stepless lock that uses a one-of-a-kind smooth flexible plunger. And Grip this! The prosthetic lock can be used in fresh water, salt water, muck, or grime. Dirt and water simply wash through its corrosion resistant frame, so patients can enjoy activities in any environment without fear of causing harm to their distal lock.
