

# Where Science Meets Style.

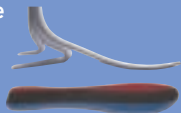

## Introducing the Freedom Silhouette™ Prosthetic Foot

The new SILHOUETTE foot combines the advanced technology you've come to expect of Freedom products with the cosmetic appeal you've always wanted. It's easy to finish, with a slim, natural-looking ankle and a refined overall cosmesis. Multi-axial carbon-fiber design and highly efficient force management deliver an exceptionally smooth, natural gait. Designed for the moderately active, K3 level amputee, the SILHOUETTE provides superb energy return and confident stability regardless of the terrain.

High science. High style. It all comes together in the SILHOUETTE prosthetic foot.

Unique design incorporating a narrow forefoot and bio-kinetically engineered floating soleplate allows for effortless multi-axial rotation during stance phase and the softer medial portion of the soleplate allows for a natural push-off at terminal stance.

The new Silhouette foot is easy to finish and elegantly proportioned, effectively combining the best of art and science.
