

The Winged Foot is designed as a multi-functional foot with a complete carbon fiber structure. It has two main plates, divided in two parts which allows +/- 10 degrees of inversion and eversion. Also, the split main plate design of the foot provides +/- 5 degrees of the torsion of the pyramid section. For a smoother gait cycle there is an additional inner carbon plate to assist during stance phase when an additional load is being carried. The plate flexes to accommodate and help ease into rollover comfortably.

±10 degrees Inversion and Eversion!

Features

- +/- 5 degrees Torsion of Pyramid
- +/- 10 degrees of Inversion and Eversion
- Multi-Axial body
- Impact absorption by inner plate
- Wide body width to increase ground stability
