

Can socks really change your life?

Ask Natalie.

SmartKnit

AFO & KAFO Socks

Natalie has worn AFOs and KAFOs for as long as she can remember. Before Natalie's orthotist told her mom about SmartKnit, she had problems with socks that didn't fit right. They wrinkled, causing pressure points and skin breakdown. Throughout the day they got wet from perspiration, and stayed wet, causing skin rashes. These problems meant that Natalie had to go for days without wearing her orthoses while her skin healed. Losing the independence of her orthoses meant not keeping up with the other kids.

SmartKnit socks, a Knit-Rite innovation, changed all that because they are proportioned correctly for people who wear AFOs and KAFOs. They provide a fit without wrinkles, thanks to high elongation Lycra® spandex. CoolMax® wicks away irritating moisture, allowing the skin to breathe. And SmartKnit socks are completely seamless, so AFOs won't cause irritation from seam pressure. Finally, all SmartKnit socks feature an antimicrobial fiber to inhibit odor-causing bacteria.

Can a pair of socks really improve someone's life? Natalie says yes.

Improve your patients' lives with the protection and comfort Knit-Rite O&P textiles provide. For more information on SmartKnit and the rest of our innovations, call us at **800-821-3094**.
