

X-STATIC® Family of Shrinkers

Knit with the magic of silver.

- Odor
- Silver ions
- X-STATIC working

Long known to kill germs, silver has found its way into O&P textiles. Knit-Rite, building on over 80 years of medical textile innovations, brings silver's antimicrobial and therapeutic characteristics to the O&P community with an expanded family of Compressogrip shrinkers constructed with X-STATIC® – The Silver Fiber™ from Noble Fiber Technologies.

Now one of Knit-Rite's most recent innovations, the Compressogrip® A/K Prosthetic Shrinker, as well as the traditional B/K Compressogrip® Shrinker, are offered with the advantages of pure silver. Silver is used in wound dressings, sutures and ointments, because silver ions bind with proteins inside and outside bacterial cell membranes, to inhibit infection before it even gets started. A healthier environment also makes sense for post-operative prosthetic shrinker applications.

Testimonials from amputees report that the X-STATIC® shrinker has helped them find relief from phantom pain. Because silver is the most conductive element, X-STATIC® products help to dissipate the electrical charges on the surface of the skin and alter the magnetic field around the body.

In addition to the benefits of silver, Compressogrip® shrinkers offer the advantages of easier fitting, lower cost, and reduced facility inventory compared to traditional shrinker products.

Call Customer Service or your sales representative today for more information on this and our other revolutionary silver products.
