

Nick wears four MCPDrivers.

IT'S ALL ABOUT FUNCTION.

Naked Prosthetics now offers four-finger prostheses: GripLock Finger, PIPDriver, MCPDriver, and ThumbDriver!

NEW DEVICE – JUST RELEASED!

The **GripLock Finger™** is Naked Prosthetics' elegant solution for amputations proximal to the MCP joint. Users can position the digit using a surface or their opposing hand, and then return to full extension by releasing the dorsal pawl or moving to the full flexion release point.

PIPDriver™

This custom device is driven by an intact PIP joint with enough residuum to engage the ring.

MCPDriver™

This custom device is driven by an intact MCP joint with enough residuum to engage the ring.

ThumbDriver™

This custom device is driven by intact MCP and CMC joints in the thumb. However, patients with more proximal amputations may still benefit from the device as long as their stump can engage the ring.
