NAKED
PROSTHETICS

GripLock Finger™

Naked Prosthetics' functional solution for amputation proximal to the MCP.

npdevices.com

Positioned using a surface or their opposing hand, and then return to full extension by releasing the dorsal pawl or moving to the full flexion release point.

The **GripLock Finger** device can be worn with or alongside our **MCP**Driver, **PIP**Driver and/or **Thumb**Driver, and provides the same colors and design choices our users love. The **GripLock Finger** is used in conjunction with a custom-fabricated socket and to be fit on a patient by a certified prosthetic clinician.

PIPDriver™
Custom device driven by an intact PIP joint with enough residuum to engage the ring.

MCPDriver™
Custom device driven by an intact MCP joint with enough residuum to engage the ring.

ThumbDriver™
Custom device driven by intact MCP and CMC joints in the thumb. However, patients with more proximal amputations may still benefit from the device as long as their residuum can engage the ring.
