

The New Standard!

FUZION™ AFO

The Fuzion AFO was developed to allow GREATER FIT, FUNCTION and FREEDOM for challenging foot deformations compared to traditional AFOs. The circumferential wrap of the Fuzion firmly and comfortably holds the foot in a more structured biomechanical position instead of trying to seat the foot with two or three straps. The Fuzion's design and materials ensure greater patient compliance for a variety of challenging clinical indications. Orthomerica — the source for truly custom product solutions — 100% custom, 100% of the time.

KEY BENEFITS

- New treatment options for patients historically not candidates for orthotic intervention & management
- Design encapsulates the foot and leg with greater control and comfort resulting in better compliance
- Optional heat adjustable plastic makes patient management much easier versus traditional AFOs
- Bi-valved and tongue options allow for better management of patients with fluctuating edema
- Available for both select adult and pediatric patients
