

THE NEW MAUCH® KNEE. BECAUSE GREAT WASN'T GOOD ENOUGH.

The Mauch® Knee has always been a solid performer. But now with improved stability, new materials and a sleek new look, it's outperforming and outlasting its predecessor.

Introducing a knee as reliable as it is rugged. A knee capable of withstanding the most unpredictable conditions. *The New Mauch® Knee from Ossur.*

The new cylinder attachment eliminates torsional and lateral loads on the cylinder.

State-of-the-art bearings contribute to smoother motion and increased durability.

Protected by rubber covers, front and back, the aluminum frame combines strength with a sleek new design.

Extension stops added to the frame prevent hyperextension and increase the cylinder's lifetime.

Randall relies on his Mauch® Knee by Ossur to enjoy an active lifestyle of hiking, biking, and in his career as a Geographic Information Systems Technician.
