# ICEROSS® SEAL-IN® V TRANSTIBIAL

## V is for Volume Adaptive Blades.

The new Seal-In V by Össur features Volume Adaptive Blades that change orientation to accommodate unique limb shapes and volume fluctuations up to the equivalent of 8 plys of sock. This helps promote secure suspension throughout the day and enables you to fit a wider variety of patients.

“Whether walking or bowling,  
I don’t worry about losing  
suction in the Seal-In V.”

## Go sleeveless!

Burdensome sleeves can bunch behind the knee, restrict range-of-motion, generate heat and increase pressure over the knee. Seal-In V is engineered to function without a sleeve, offering a simpler, less cumbersome solution.
