

All the right moves

CETERUS™
FLEX FOOT™

*Active individuals demand a prosthesis with unique advantages.
The new Ceterus™ foot integrates several universal principles to deliver them.*

Optimal Energy Efficiency

The Flex-Foot® patented J-shape and CarbonX Active Heel™ deliver a steady, controlled system of energy storage and return to ensure less fatigue with any activity.

Self-Adjustable Shock Absorption

Amputees now have the power to adjust a built-in vertical shock pylon for maximized comfort and performance. Countless activities can be enjoyed without ever changing feet.

Smooth Rotation with Progressive Stiffening

Ceterus™ offers rotation without any abrupt stops. As the body pivots, a unique axial rotation unit simulates a natural twisting motion by gradually building resistance.

*For active amputees, choosing Ceterus™ is always the right move.
