

Go places you never wanted to go.

Daily life can lead us into the rough. With Total Knee® 2000, at least getting in – and back out – is easier than ever. By incorporating hydraulics for endless swing phase adjustments, Total Knee® 2000 frees amputees to walk with a natural and bio-mechanically sound gait. Plus, its geometric design offers confidence against collapse by securely locking at the critical moment of heel contact. Total Knee® 2000 gets you there. The places you never want to go, and the places you do.

Total Knee.
Geometric Locking System

Life Without Limitations
