COMPROMISE IS NOT AN OPTION.

Every life is a work of art. There should be no limitations. That's why we have relentlessly designed and developed Flex-Foot® products for every lifestyle. Each one a leader in its class. Flex-Foot employs advanced, proprietary technologies such as computer-enhanced carbon fiber layering, the patented J-shape, and the CarbonX Active Heel® that provide unmatched active tibial progression and energy return. A full-length toe lever ensures stability throughout the entire gait cycle. These technologies, working together, create an efficient system that returns substantially more energy than any other prosthetic foot.

There are imitations of the Ossur Flex-Foot design. But there are no substitutes. Why compromise?

Call 1-800-233-6263 or visit us at www.ossur.com.

Life Without Limitations
