## ICEROSS® TRANSFEMORAL SEAL-IN™

- Excellent suspension and rotational control
- Enhanced comfort
- Ease of donning

The complications of donning a transfemoral suction socket have just been eliminated. The new ICEROSS TF Seal-In liner allows the user to enjoy the benefits of suction suspension by simply rolling on the liner and stepping into the socket. The liner brings the same breakthrough hypobaric sealing technology (HSM™) to transfemoral amputees that we recently introduced to transtibial amputees.

To find out more about the ICEROSS TF Seal-In liner visit our website at [www.ossur.com](http://www.ossur.com) or call 800 233 6263.
