

YOUR GOAL

Better patient outcomes.

OUR COMMITMENT

Advanced technology that allows you to provide your patients with more options.

As the world's first mechatronic stance and swing phase control orthosis system (SSCO®), C-Brace controls both the stance and swing phase hydraulically with microprocessor sensor technology. For patients with neurological conditions affecting their legs, C-Brace provides support during the entire gait cycle and adapts to everyday situations in real-time. Because when people like David succeed, we have all reached our goal.

We all move **forward, together.**
