

Kenevo

Put patients first.

Kenevo is the only microprocessor knee designed for the unique needs of the K2 patient. With enhanced safety features like stumble recovery plus, supported stand-to-sit and sit-to-stand functions, consistent swing release with irregular gait and use of walking aids, and intuitive stance, Kenevo provides users a greater sense of security. Put your patients first and provide the technology that will give them back their mobility, confidence, and independence.
