With Your Patients Every Step of the Way

Microprocessor stance ensures stability at heel strike. This technology means patients no longer need to fear falling and can count on their prosthesis.

Microprocessor stance relies on information taken from the sensors and uses real-time gait analysis to activate stance control for maximum security.

This technology enables the Compact to anticipate – not react – to your patient's every move. That means greater stability every step of the way.

To give your patients the stance support they need, call your local Otto Bock Sales Representative at 800.328.4058.
