

SMOOTH MOVES

INTRODUCING THE NEW 1C31 TRIAS+

A unique engineering concept modeled after the anatomical foot, the Trias+ has remarkable dual spring elements that deliver superior gait and an incredibly smooth response for moderate walkers. The lightweight carbon fiber construction ensures that it is durable enough to maintain the pace.

Dual springs in the forefoot for smooth energy return at toe-off.

Dual springs in the heel for shock absorption and easy motion to foot flat.

A base spring to unify these elements for superb rollover, stability and response.
