

Go from Therapy to Final Fitting...

...with Just One Knee.

The 3R93 is the versatile new K1/K2 solution from Otto Bock—adapting to the needs of lower-mobility patients, from initial therapy to confident walking.

With its manual lock mode, the 3R93 is an ideal knee joint, providing targeted support for therapy following an amputation. Then, as mobility increases, the 3R93 can be converted to a knee joint with secure friction brake with stance flexion, offering outstanding stability and safety.

Take a look at this hard-working knee today. Contact your Otto Bock sales representative at 800.328.4058.
