

Making a Good Thing Even Better

Every Axtion® 1E56 Foot now comes with two heel wedges, which allow you to select the optimal heel stiffness for your patients in a single fitting session. The heel wedges are held mechanically in place, and to swap them out all you need to do is load and lock. No glue, no returns, no waiting.

The Axtion 1E56 is a compact and lightweight high-performance foot for active amputees. Its low structural height makes it perfect for patients where only limited space is available. New heel wedges make it easy for individual adaptation of heel stiffness. As an all-around talent, the Axtion is ideal for everyday use as well as for recreational sports, and its heel adjustment wedges make it easier to optimize the fitting in one session.
