Quality for life

The C-Leg[®]

Your patients can tell the difference.

At work or with family, Jon relies on his C-Leg[®] for stability – he doesn't have time to worry about his next step. That's why Jon depends on the most clinically evaluated and studied prosthetic knee in history.

The C-Leg remains the Standard of Care in microprocessor knees. Don't settle for less.

And remember, the C-Leg goes great with any of Ottobock's newest feet: the lightweight Triton carbon fiber foot; the Triton Vertical Shock (VS); the Triton Harmony[®] with integrated vacuum technology; and the new Triton Low Profile.
