

Take a Step in the Right Direction

With the E-Mag Active Stance Control KAFO!

Easy for practitioners to calibrate, even easier for patients to use, the integrated, low-profile joint of the E-MAG Active KAFO provides the best in electronic stance control and helps your patients get into a more active lifestyle.

With no linkage or sensors below the knee, the E-MAG Active is the perfect solution for those patients who have limited ankle function or would normally wear a locked KAFO—and it even accommodates a joint contracture of up to 15°.

Help your patients get back into the swing of things with the E-MAG Active!
