

The Need for SPEED

Porsche Carrera GT: 0-60 in 3.8 sec.

SensorHand® Speed: open to close in .30 sec.

High Performance

The new SensorHand® SPEED is more than twice as fast as standard hands. Just as important, newly enhanced EMG processing helps the hand react more quickly to the user's muscle signals. Add in the amazing AutoGrasp™ feature, which automatically adjusts grip force to make sure objects don't slip, and the SensorHand® SPEED crosses the finish line ahead of all competitors.

The SensorHand® SPEED joins a complete line of myoelectric and body-powered components, making it simple to build the best upper extremity prosthesis for your patient. And it's all backed by the assurance of Otto Bock quality and our Professional Service team's education and technical support.

Find out how fast you can get the power of SensorHand® SPEED into your patient's hands. Call **800.328.4058** today.
