

The Power to Change Lives

HARMONY® P2

40% Lighter
Slimmer
Easier to install
Improved shock absorption

You appreciate the Harmony® for all that it has to offer: enhanced volume management, excellent proprioception and improved skin health.

But you also told us you also wanted greater function, lighter weight, and a slimmer profile.

We delivered.

We've re-engineered the new Harmony P2 to include torsional damping and rotation, while also adding a totally new vertical shock-absorbing system with elastomer rod technology. It also has an improved, double-filtration system that makes it more reliable than ever before.

And we didn't stop there. By integrating the pyramid into the Harmony P2, we've made it lean (40% less weight) and clean (even easier to finish the prosthesis).

To learn more about the Harmony Volume Management System, please call us at **800.328.4058** today.
