

It's the Dawn of a New Day

A multiaxial foot that puts spring in your patient's step — and doesn't bounce back for maintenance

Engineered to combine carbon fiber with urethane, the revolutionary LuXon® Journey combines multiaxial function with smooth rollover and excellent energy return to give your patients a natural gait whether they are chasing grandchildren, playing 18 holes or hiking across uneven terrain.

Equally important, beta-tests demonstrated that Journey requires less setup and maintenance than comparable prosthetic feet on the market today. So your patients spend less time in your office—and more time on their Journey.

For more information or to see a demonstration of the new LuXon Journey, call **800.328.4058** today.
