

# Engineered to be Smarter

## Quality. Reliability. Functionality.

When you're selecting the appropriate foot, you want to be sure it's a smart choice from every angle.

The **Axtion™** is engineered to deliver smooth rollover and durable responsiveness in a low-profile (2 1/8"), lightweight (13.6 ounce) package. To make it even smarter, the weight limit has just been increased to 275 lbs.

The **Journey™** provides multi-axial function and smooth rollover without the maintenance hassle.

With the Axtion and Journey feet from Otto Bock, you have the confidence of knowing you are working with the global leader — supported by the largest Professional and Clinical Services team in the industry.
