

# The Next Generation Of Soft Spinal Orthotics

*The first soft spinal system designed to maximize patient compliance while providing the orthotist a device that is easily modified to achieve a more intimate fit.*

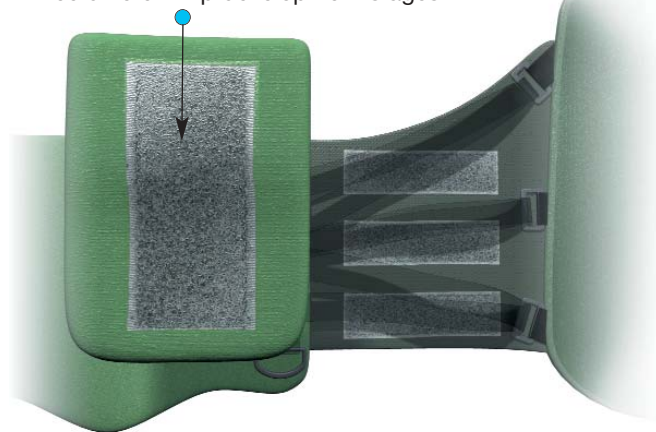

Three point closure system provides uniform, abdominal compression with just two straps. All straps attach to the anterior panel and have large, oversized D rings for optimum leverage.

The overlapping, built-in corset, provides immediate abdominal compression and allows the patient to don the device without assistance.

Repositionable, lateral panels are configured to maximize stability. Each lateral panel insert is available in three different hip development stages.

Anterior, posterior and lateral panels can be adjusted to the patient and are available in a wide range of prefabricated configurations.

#### **Options Include:**

- Convertible to TLSO
- Posterior Thoracic Extension
- Sternal Pad Kit
- Dorsal Strap Kit
- Inflatable Lumbar Chamber
- Hip Spika Attachment Kit
- Custom to measure or pre-fab
- Sizes xxsmall through xxxlarge
