

Ez stride *Custom*

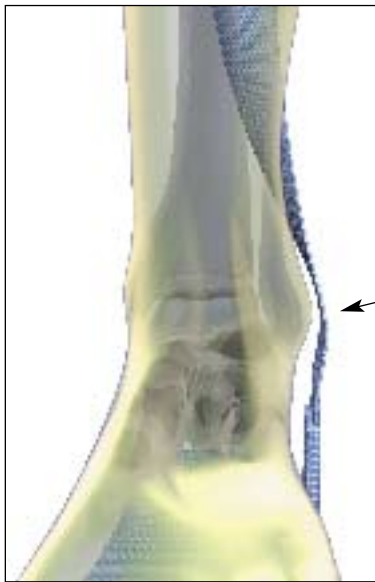

Totally new fabrication technique increases overall strength, boosts appearance and expands the dynamic properties. The #1 composite, carbon fiber AFO just got better!

Calf band is customized to rest at mid-calf thereby optimizing leverage and comfort

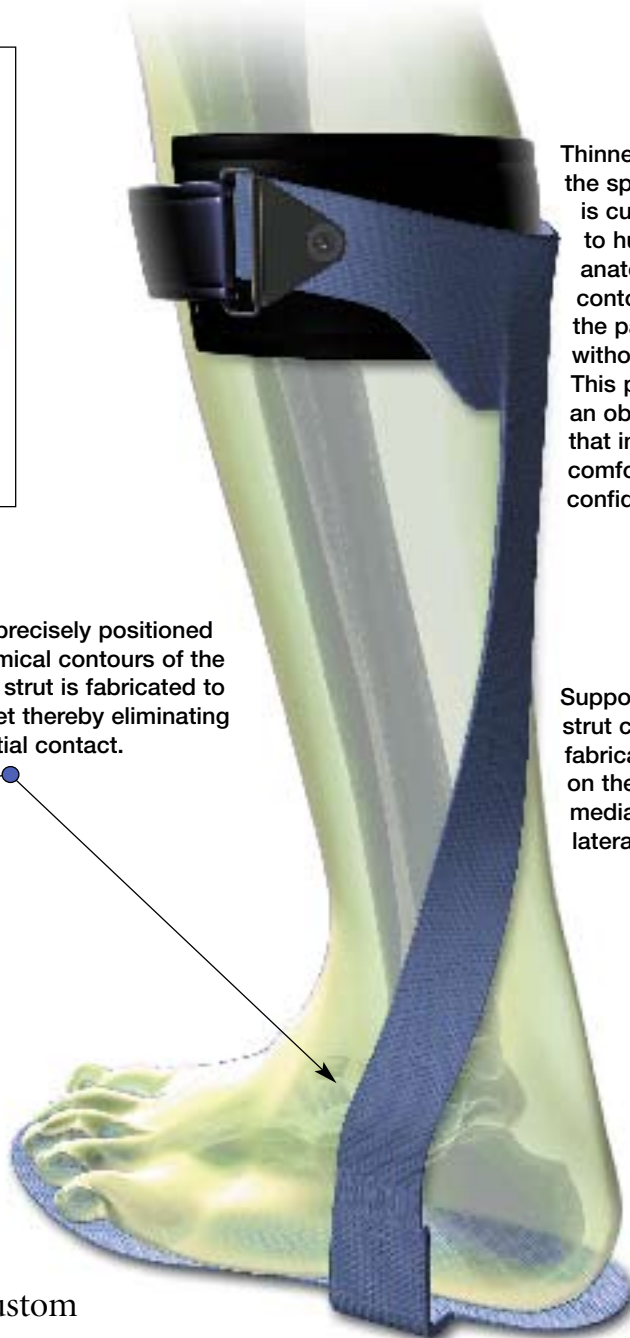

Thinner and lighter, the spiral design is customized to hug the anatomical contours of the patient without contact. This produces an obscure look that increases comfort and confidence.

Malleolus relief is precisely positioned to match the anatomical contours of the patient. The lateral strut is fabricated to maintain a 1/4" offset thereby eliminating any potential contact.

Support strut can be fabricated on the medial or lateral side.

Footplate is trimmed to correctly fit into the patient's shoe.

Now your patients can enjoy a more intimate fit with the latest, fully customized version of the EZ Stride. The EZ Stride is custom fabricated to your patient's model. Each orthotic is hand made to the exact specifications of your patient's cast, cad file, tracing, or measurements. Order the EZ Stride today and find out why others are calling the EZ Stride the lightest, most dynamic floor reaction ankle, foot orthotic around!
