

# renegade

(2003) *n* 1: revolutionary prosthetic foot; *adj* 2: unconventional;

## One look tells you it's profoundly different. One fitting and you'll know how extraordinary it truly is.

Traditional design assumes only something similar to the shock on your car could absorb the jarring vertical loads exerted on a prosthetic foot. But the composite visionaries at Freedom Innovations have taken a right turn from tradition and developed the **first all graphite, carbon fiber shock - the Z Shock**. The Z shock's composite structure allows dissipation of vertical loads while transferring kinetic energy into an elastic form. This energy is released through the upper member of the foot providing rebound at toe-off.

- Extremely lightweight – 0.87 lbs without footshell
- No fluid replacement or hardware maintenance
- Unique 45° shank pulls tibia forward quickly, silently, without “pistoning”
- Floating heel plate ensures softer heel strike and prolonged life of footshell
- Clearance of 6.6" for sizes 25-27 cm.
